

ANMOL GUPTA

Founding Engineer (5+ yrs) building AI products end-to-end: real-time voice agents, LLM evaluation, event-sourced backends
+91 7089418564 | anmolgup.1999@gmail.com | LinkedIn | GitHub

EXPERIENCE

Yolex Labs

Founding Engineer · Full-Time

Remote

Nov 2025 - Present

- Own two AI products across the full stack: **STORM** (AI-generated multi-modal work simulations: voice, code, spreadsheets, canvas) and **Candoor** (anonymous AI voice interviews); F#, TypeScript/Node.js, PostgreSQL, event sourcing.
- Made LLM simulation generation reliable by gating it with a deterministic **31-category role classifier** (constraining eligible task types, question banks, difficulty) and auto-validation of checkable tasks (code, spreadsheets).
- Cut voice-agent response latency to sub-second and barge-in to ~680ms on **OpenAI Realtime**, using dual parallel WebSockets (conversation + STT) and a dual-VAD design (server turn-taking, RMS-hysteresis client VAD).
- Validated the voice stack in an adversarial A/B against **LiveKit + Silero + Krisp** (95-99% STT under fan, music, accented speech); adopted the winning pieces (Silero VAD, Krisp) without a costly migration.
- Improved **scoring fairness** for accented speakers via async LLM transcript correction, with immutable raw records for audit.
- Built a position-aware **LLM evaluation pipeline** in F# extending G-Eval: judge models score weighted role-specific rubrics over transcripts, canvas state, and tool traces, grading competency adherence rather than text quality.
- Shipped **Candoor** single-handedly from zero to a deployed product in 26 days: F#/Akka event-sourced core, real-time voice interviewer, LLM de-identification and theme clustering, hierarchy-aware reporting, and eval harnesses for every AI step.
- Engineered **verifiable anonymity**: reflection audits prove no persisted event can reference a person; AES-256-GCM sealed submissions with crypto-erasure retention; anonymous single-use credentials; 370 automated tests.
- Rebuilt 100% of production infrastructure solo in under a week when the infra-owning cofounder departed: hosting, DNS, TLS, CI/CD (GitHub Actions), deploy pipeline, backups, OAuth; zero data loss.
- Ran enterprise pilots and evaluations: banking, energy, and a 150K-employee IT-services firm.

Storesdata

Software Engineer · Contract

Remote

Feb 2024 - Dec 2025

- Built an AI-powered pipeline analyzing **5M+ Shopify stores** (TypeScript, Bun, Prisma, PostgreSQL), with **snapshot versioning** tracking storefront, product, and pricing changes over time.
- Boosted ingestion throughput **25%** via event-driven **Inngest** workflows; ran **500+ concurrent scans** with backoff.
- Cut storage costs by **50%** through blob migration to **S3** and Gzip compression.
- Integrated AI agents using **Mastra.ai**, **Ollama**, and **Vercel AI SDK** for intelligent querying and summarization.

Sundial

Founding Software Engineer · Full-Time

Los Angeles

Sep 2023 - Dec 2024

- Delivered an **AI Assistant** for Solar Installation Code Comprehension using **Next.js** for chatbot development.
- Achieved **30% faster async processing** with a **Java Spring Boot + RabbitMQ** backend (optimized queues).
- Deployed Cloud SQL and VPC networking on **GCP**, boosting data processing efficiency **40%**; added GitLab **CI/CD**.

Google Summer of Code

Mifos Initiative · Internship

Remote

May 2022 - Aug 2022

- Integrated a centralized **IAM System** into **Apache Fineract's** Payment Hub Infrastructure enhancing system security.
- Deployed an enterprise-grade **Authentication Framework** using **OpenID Connect, Kong Plugins, and Keycloak**.
- Implemented backend service using **Kubernetes, Nginx & Java Spring Boot** reducing incident reports by **30%**.

Voomp Technologies

Co-Founder and Software Engineer · Full-Time

Kolkata

Aug 2020 - May 2021

- Co-founded Voomp; built and sold **Loan Management Systems** for NBFCs; generated **\$100K+ revenue** in 9 months.
- Enhanced Fineract's microfinance platform & produced a **Co-Lending Feature** to enable **multi-lender loan** capabilities.
- Secured a **90% client retention rate**, navigated complex sales cycles, and maintained high client satisfaction.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, F#, Node.js

Databases: PostgreSQL, MySQL, MongoDB, Redis

Frameworks: Django, Flask, Express, NestJS, Spring Boot, Next.js, Commander.js, React, XState

Tools & Platforms: GCP, Kubernetes, Docker, OpenAI Realtime, RabbitMQ, Inngest, Mastra.ai, Ollama, Git

EDUCATION

Indiana University, Bloomington, US

MS in Computer Science

Aug 2021 - May 2023

SRMIST, Chennai, India

B.Tech in Information Technology

Aug 2016 - May 2020

PUBLICATIONS
